University of Florida pediatric neurosurgeons perform more than 300 neurosurgical procedures a year for the treatment of a variety of disorders and conditions.

- Arachnoid cysts
- Brain tumors
- Chiari malformation
- Craniosynostosis
- Epilepsy
- Hydrocephalus
- Moyamoya disease
- Pituitary disease
- Skull base disease
- Spasticity
- Spina bifida
- Spinal cord tumors
- Spinal deformity
- Tethered spinal cord
- Vascular malformations

Lance S. Governale, MD  
Chief, UF Division of Pediatric Neurosurgery  
L.D. Hupp Associate Professor of Neurosurgery  
UF College of Medicine

Clinical interests: arachnoid cysts, brain/spinal cord tumors, cavernous malformations, craniosynostosis, hydrocephalus, minimally invasive neurosurgery/endoscopy, pituitary disease, tethered spinal cords, skull base disease

Jason E. Blatt, MD  
Assistant Professor  
UF Division of Pediatric Neurosurgery  
UF College of Medicine

Clinical interests: brain tumors, epilepsy, minimally invasive and transnasal brain surgery, cerebrovascular disorders, congenital spinal deformities and malformations
